**The latest news from Hunza**

**Hunza Horizons February 2018**

Hunza creates lighting systems that make life easier and more pleasurable. Hunza Horizons is designed to update you on the latest exciting developments from the world of Hunza.

### **New Product Feature: Reverse Polarity Protection**

Hunza has designed a Reverse Polarity Protection system, which prevents damage to the LED in our PureLED Series Version products if a fixture is wired incorrectly during installation. The system automatically detects reverse polarity connection and instantaneously diverts power away from the LED before any damage occurs.

### New Accessory: Stake Mount

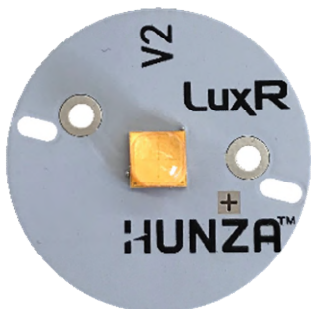

We are proud to announce the latest addition to our mounting accessories, based on suggestions from our valued customers.

The Stake Mount is a new alternative to the Super Spike, used for secure installation of the Hunza NPS Spot. The Stake Mount makes installation easy, with a length of 150mm (6"), dual spikes and construction of power coated stainless steel with a laser-cut Hunza logo on the side.

The Super Spike is still available and is ideal for extra secure mounting of Hunza landscape fixtures that feature a 25MM (1") pole.

### Product Improvement: PureLED PC Boards

While the original PureLED PC board and mounting system was revolutionary in concept and application, our Hunza Design Leader, Benjamin Kamp, felt that there was scope to simplify the design and make it easier to install and remove in the field.

Previously, the board included two pins and was fixed into place with two stainless steel screws.

With the new design, there is no longer any need for the pins, as the screws not only hold the board in place but also conduct the power to the LED chip.

## Hunza Easter Holiday

The office and factory will be closed from the 30<sup>th</sup> of March to the 2<sup>nd</sup> of April for the Easter Holidays. We will reopen on the 3<sup>rd</sup> of April.
